## Early Evidence Kit

Contains everything required to enable first response officers to collect a urine sample and a mouth rinse from a complainant of sexual assault. It avoids unnecessary discomfort for the complainant whilst a full medical examination is awaited. The product is to be utilized as soon as practically possible after the complainant has reported the offence and is provided for use before a medical examination takes place. Allows evidence that may be lost with the passing of time to be collected from urine where alcohol and drugs analysis may be required, particularly useful when drug-facilitated sexual assault is suspected, and mouth rinse where oral penetration is alleged.

Catalogue No	F680-200
